aRts for each area. What would you add to Diablo 3, if you had the money? If you have something specific in mind, please post it in the Comments. A: A gold sink. A way to start with a low level character, and then sink all your money into a few items, to unlock everything in the game. Of course, a gold sink is optional. A free exp and gold sink. Diablo 3 makes a great game, but it could be even better if Blizzard had simply spent the money on better content and/or removed the grind from the game. Full Character Customization. In Diablo 3, you will only be able to make two character appearances, one by changing your gear and the other by changing your name. It doesn't matter how many powers you have, how many Paragon and Crusader levels you've acquired, how many times you've killed the same boss, how many times you've used your skill point, and so on. Since you have 10 extra skill points per level, you could easily have a playable character built around your preferred skills. There are already several posts in this forum asking how to have multiple skillsets. For example, I just finished a barbarian with the following set of skills: Three different attacks with 4, 5, and 6 attacks. All at the same time. I achieved this with a class that is known to have a high amount of attack damage (Assassins), and the "same time" part comes from a skill that lets you start a new attack as soon as the previous one finishes. Two different elemental attacks, with a ranged attack as a secondary. A secondary attack that unleashes a chain of melee attacks, not unlike an impale technique. In short, not only would you be able to play how you want, but also to achieve what you want. f, $0 = f + 5^z + 8$ for f. 2 Let $n(m) = -m^2 - 4^m + 5$. Let a be $\pi(-5)$. Let $x = -10 - 10$. Solve $-v - 4^j + x = a$, $0 = -5^v - j + 6^j + 15$ for v. Let $g = 7 + -5$. Let $u = 2 + 0$. Suppose $0 = -2^a + 3^f + 82157476af$
